

Communication in Motion

The increase in employee mobility and the exploding number of daily communications characterizes today's business environment. Many companies are looking to unified messaging to meet such growing demands. The Kinesis™ unified messaging system features true unified messaging and real-time call control. It offers an ideal solution for addressing the changing communications requirements of your business, today and tomorrow.

True Unified Messaging

Kinesis is a Microsoft® Windows® 2000 server-based solution designed for businesses requiring unified messaging within a Microsoft Exchange® environment. It harnesses the power, reliability and scalability of Microsoft Exchange and Windows 2000 to provide simplified administration, a single directory service and a single message store. Kinesis' truly unified architecture minimizes the learning curve and maximizes the efficiency of your IT professionals.

Powerful Features

Kinesis allows you to check messages and administer your mailbox settings over the telephone. However, it also provides a dynamic, personal web browser interface -- the Kinesis Assistant -- allowing you to customize your personal mailbox options quickly and efficiently from your PC. Optional modules are also available, such as ViewCall®, which lets you handle your live telephone traffic from your desktop, as well as features that reflect the latest Text-to-Speech technology.

True Business Benefits

Whether you work from your office or from the road, you'll benefit from quick access to, and immediate notification of, messages delivered to one place. Kinesis allows you to access voice, fax* and e-mail messages from your Microsoft Outlook® inbox, where you can manage the information from a PC, telephone or the Internet. You can listen and reply to your e-mail over the telephone using the latest Text-to-Speech technology, check voice messages from the Internet, or forward faxes to wherever you may be. You can also visually scan and prioritize incoming calls and messages from your desk or laptop PC so that critical time constraints can be met with ease. With Kinesis, the ultimate benefit is that all of your messages are consolidated into one place, giving you the power to access, manage and reply to them from virtually anywhere.

Poised for the Future

Kinesis is designed for the future. By working with traditional telephone systems as well as Internet Protocol (IP) solutions, Kinesis protects your existing investment and positions your business for a smooth transition into the converged environments of the future. Development initiatives for voice and data convergence position Kinesis for tomorrow's expanding unified communications possibilities.

* Fax functionality requires a third party fax server.

MINIMUM SERVER REQUIREMENTS

• CPU	Pentium® 4 1.7 GHz
• RAM	512 MB
• Hard Drive	9 GB
• Server OS	Windows 2000 Server with SP3
• Client OS	Windows 95, 98, 2000, and XP™
